OTIS Part 1 - User Request Process

OTIS New Data Pull Request

Fill in the overview details of your request

Requestor Email
Search for the requestor's email

Request Name
Type the name of your request

Request Type

Business Purpose
Type the purpose of your request

Request Status
New

Frequency

File Load Type
Select data load type

File Output Type
Select the desired file output for integration

Select Fields

- Users enter key request details including business purpose, frequency, and desired file output.
- The request then moves to field selection to define the data needed.

OTIS Field Selection

Select your desired fields

☐ **Work Information**

☐ Employee Type ☐ Employment Type ☐ Compensation Grade ☐ Job Family

☐ Job Title ☐ Work Email Address ☐ Work Phone Number ☐ Employee ID

☐ **Work Location**

☐ Work Street Address ☐ Work City ☐ Work State ☐ Work Zip Code

☐ Work Country

Previous Page Apply Filters

- Users select the specific HR data fields they want included in their request.
- Selected fields are grouped by category and associated with the request.

OTIS Filter Selection 

Click the Submit Filters button to apply filters or skip

Field Name	Filter Operator	Enter Filter Value 1	Enter Filter Value 2
	v	Filter Value 1	Filter Value 2

Submit Filters

- Selected fields automatically carry over, allowing users to apply specific filter values.
- Submitted filters are stored in Dataverse with the request.

OTIS Part 2- Data & Approval Process

Dataverse Data Model

- Request data is organized through related Dataverse tables connecting employees, requests, selected fields, and filters.
- This structure keeps each user's selections and filters tied to the correct request.

Requested Fields + New User Requested F... ⋮

Filter by keyword

☐ Display Name ↑ ▾	User Request ▾	FieldCatalogue ▾	Data Type ▾
☐ Compensation Grade	Test	crf88_field_16	Text
☐ Employee ID	Test	crf88_field_11	Number
☐ Employee Type	Test	crf88_field_20	Text
☐ Employment Type	Test	crf88_field_21	Text
☐ ...	...	...	...

Rows: 8

- Admins review the submitted request along with the user's selected fields and filters.
- The request can then be approved or denied, triggering the appropriate automated notification.

Travelers Part 1: Database Design

ERD:

- An ERD showing the main tables used in the database.
- Connected customers, policies, claims, renewals, and other related data.

Customer and Policy Analysis:

Customer 1 X								
SELECT c.CustomerID, c.FirstName AS CustomerFirstName, c.LastName AS C								
Enter a SQL expression to filter results (use Ctrl+Space)								
	123 CustomerID	AZ CustomerFirstName	AZ CustomerLastName	123 NumberOfPolicies	123 TotalPremiums	AZ AgentFirstName	AZ AgentLastName	
1	3	James	Lloyd	4	13,129.36	Clayton	Gonzalez	
2	26	Arthur	Schultz	3	4,115.06	Unassigned		
3	46	Deanna	Sanders	2	2,820.77	Christopher	Owens	
4	27	Angela	Walker	2	3,483.8	Unassigned		
5	22	Kari	Phillips	2	5,220.09	Karen	Harris	
6	17	Debra	Montes	2	2,289.02	Unassigned		
7	42	Vanessa	Hensley	2	9,164.41	Veronica	Stewart	
8	10	Monica	Ramirez	2	6,433.58	Veronica	Stewart	
9	7	Nancy	Lowery	2	5,982.13	Lori	Walsh	
10	14	Janice	Burgess	2	4,822.62	Dennis	Ramos	
11	35	Kendra	Duncan	2	6,126.21	Karen	Harris	
12	48	Raymond	Jones	2	5,245.8	Unassigned		
13	36	Francisco	Parrish	2	5,483.72	Unassigned		
14	20	Brittany	Miller	1	3,915.04	Donald	Harper	
15	40	Emily	Larson	1	3,530.32	Terri	Kelley	
16	8	Jennifer	Nunez	1	1,447.59	Unassigned		
17	38	Stefanie	Hoffman	1	2,502.45	Unassigned		
18	4	Joshua	Cain	1	3,384.43	Veronica	Stewart	

- Using SQL to identify customers with multiple policies and compare their total premiums.

Renewal and Retention Analysis:

```

SELECT
    c.FirstName AS CustomerFirstName,
    c.LastName AS CustomerLastName,
    c.Email,
    c.PhoneNumber,
    r.RenewalDate,
    r.RenewalStatus,
    ca.FirstName AS AgentFirstName,
    ca.LastName AS AgentLastName,
    ca.Email AS AgentEmail
FROM
    Customer c
JOIN
    Policy p ON c.CustomerID = p.CustomerID
JOIN
    Renewal r ON p.PolicyID = r.PolicyID
JOIN
    Claim cl ON p.PolicyID = cl.PolicyID
JOIN
    ClaimsAgent ca ON cl.ClaimAgentID = ca.ClaimAgentID
WHERE
    r.RenewalStatus IN ('Pending', 'Cancelled')
ORDER BY
    r.RenewalDate ASC;

```

Week 4	Before	2 PM - 5 PM	54	18	72%	Meets Standard
Week 4	Before	5 PM - 8 PM	75	25	68%	Below Standard
Week 5	After	8 AM - 11 AM	30	10	82%	Strong Performance
Week 5	After	11 AM - 2 PM	39	13	79%	Meets Standard
Week 5	After	2 PM - 5 PM	57	19	76%	Meets Standard
Week 5	After	5 PM - 8 PM	72	24	73%	Meets Standard
Week 6	After	8 AM - 11 AM	27	9	84%	Strong Performance
Week 6	After	11 AM - 2 PM	42	14	81%	Strong Performance
Week 6	After	2 PM - 5 PM	57	19	78%	Meets Standard
Week 6	After	5 PM - 8 PM	75	25	76%	Meets Standard
Week 7	After	8 AM - 11 AM	30	10	86%	Strong Performance
Week 7	After	11 AM - 2 PM	39	13	83%	Strong Performance
Week 7	After	2 PM - 5 PM	60	20	81%	Strong Performance
Week 7	After	5 PM - 8 PM	72	24	79%	Meets Standard
Week 8	After	8 AM - 11 AM	30	10	88%	Strong Performance
Week 8	After	11 AM - 2 PM	42	14	85%	Strong Performance
Week 8	After	2 PM - 5 PM	57	19	83%	Strong Performance
Week 8	After	5 PM - 8 PM	75	25	82%	Strong Performance

- Organized two months of sample Drive Up data to compare order volume and on-time performance.
- Used **XLOOKUP** and **conditional formatting** to identify performance below the 70% standard.
- Analyzed the first four weeks of data and suggested rush-hour staffing and layout changes.

PivotTable + PivotChart:

Avg. On-Time %		
	Before	After
Week 1	67.25%	
Week 2	69.25%	
Week 3	71.50%	
Week 4	74.00%	
Week 5		77.50%
Week 6		79.75%
Week 7		82.25%
Week 8		84.50%
Average	70.50%	81.00%

- Tracked performance over the following four weeks to measure results after the suggested changes.
- Used a **PivotTable and PivotChart** to analyze weekly performance trends.
- Presented findings to **leadership** to illustrate the impact of the changes.
- Average on-time performance increased from **70.5% before the changes to 81% after.**

**Sample data used to recreate the analysis to protect private company information.*

- Built an interactive **Power BI dashboard** to visualize Drive Up performance before and after operational changes.
- Used **Power Query** to prepare and organize time-period data for accurate reporting and chronological analysis.
- Created **KPI cards and interactive slicers** to compare performance and filter results across different times of day.
- Developed weekly trend and time-period visuals to show how on-time performance changed after the suggested improvements.
